

## Data analyst @Quansic

### About Quansic

Quansic is a Swiss based fast growing tech startup at the heart of music metadata. By delivering accurate identifiers to the music industry we enhance the traceability and the transparency of the music exploitation for the benefit of all. Quansic serves the most prestigious and renowned companies in the Digital Music Industry.

### Your responsibilities

You will work with a team of talented engineers and process a large amount of Music Metadata.

You will ingest, store, filter, process, match, archive various metadata sources and help Quansic maintain the largest and accurate metadata repository of Performers and Songwriters.

### Required skills

- You are passionate about music metadata
- You are experienced in SQL query language
- You are experienced with Python scripts
- You know how to manipulate large data sets in various formats (XML, Json, CSV)

### Additional skills

- You are knowledgeable with Google Cloud
- You are knowledgeable with Graph database and the Cypher query language
- You are creative and independant
- You are fluent in English

If you lack any of these additional skills, no worries - we will be happy to train you. Except if you lack creativity - this cannot be taught.

### Education

- We don't care. Just prove us that you can do it.

### The Job

- Swiss based working contract (employee or freelance)
- Work from Home
- Passionate team
- Prestigious clients

- Full time position
- Stock-option plan
